

INDIVIDUAL ASSIGNMENT SPECIFICATION (Iteration 2)

Red-Lion team

Team member:

Kamrun, Lei, Lijia, Soumya

=====

Author: Soumya

1) Task name: Report Link model class

Task description: This task will prepare the backend data essential for the report link functionality

Subtasks: 1) Creating report model class (Scaffold)
2) Adding validations for the model class
3) Add seed data for this class
4) Add association with link class.
5) Add fixtures data and write unit tests

Evaluation: The report model class should have the following validations

- 1) Reason should not be blank
- 2) Reason should allow only numbers, characters, period, comma.

2) Task name: Creating UI page for the report link functionality

Task description: This page will provide an interface which will enable user to Submit his reason for reporting the link.

Subtasks: 1) Create html view page for report link
2) Add route for navigation to this page
3) Add controller for report link.

Evaluation:

- 1) The UI page should have a textbox for entering the reason and also a submit button.
- 2) The report link function should allow a user to report a **particular link only once**.
- 3) User should be able to report any link he wants from the list of links only when he is **logged in**.
- 4) The UI of report page should be uniform in design with home page UI design.

3) Task name: View report functionality (for Admin)

Task description: This functionality allows admin when logged in, to go through all the links which were reported by users along with the reason for which they were reported.

Subtasks: 1) Add html view page for showing all the reports
2) Add route for this page
3) Add controller for view report
4) Connect it to the report model class.

Evaluation: 1) The view report button is visible only when logged in as admin.

2) When the view report button is clicked it should take admin to a new page showing all links which were reported along with their reasons.

3) The UI of view report page should have uniform design same as the home page.

4) Task name: View all links functionality (Admin)

Task description: This functionality allows the admin to maintain read it later app by viewing all the links posted public or to followers only.

Subtasks: 1) Write logic to make all links visible to the admin when he is logged in irrespective of the level of link (0 -to all users, 1- to only himself/herself 2- to only followers)

Evaluation:

- 1) The admin when logged in, should be able to view all links as a normal user ie. it should display all details (title ,description, date of publication).
- 2) Like any other user, admin should be able to view the content of the link by clicking the link.
- 3) The admin should see same interface as a user could see.(Same uniform UI)

5) Task name: Delete any link (Admin)

Task description: This functionality allows an admin to delete any link (posted publicly or to followers) which he finds to be vulgar or not ethical.

Subtasks: 1) Add a delete button to view report UI page.

2) Make the delete button functional.

Evaluation: When the admin clicks delete button the link should indeed be deleted from the database. It should display a message that link is successfully deleted. Delete button should only be accessible to admin i.e only admin can delete any link that too when he is logged in after authorization.

Author: Lei

1) Task name: Add tags to link

Task description: When posting a new link, the user can choose to add one or more tags to the link. The user can type in the label of the tag but with a length limitation of 15 characters.
